Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Low-odor Coalescing Agent for Water-based Coatings competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Low-odor Coalescing Agent for Water-based Coatings is an environmentally friendly, low-odor chemical additive. Its main function is to help soften and fuse the emulsion particles during the drying and film-forming process of water-based coatings, forming a complete and dense coating film. It can effectively lower the minimum film-forming temperature of the coating, improve the adhesion, scrub resistance, flexibility and gloss of the paint film, and reduce cracking of the coating film. The upstream sector comprises basic chemical raw materials, such as high-boiling-point ester intermediates, polyols, bio-esters, surfactants, and dispersants. The downstream sector includes coatings manufacturers and brand customers, who incorporate additives into water-based formulations to meet environmental and performance requirements. End markets include home improvement, industrial, construction, and automotive sectors. Global sales in 2024 are expected to be approximately 359,000 tons, with an average market price of approximately US\$1,600 per ton. Single-line production capacity varies depending on the production process and investment in the production equipment, typically ranging from 3,000 to 10,000 tons per year, with industry gross profit margins ranging from 20% to 35%.

The global Low-odor Coalescing Agent for Water-based Coatings market size was estimated at USD 610.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
