Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Low-power Generator Set competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A low-power generator set is a compact power-generation unit typically rated below 30 kW, using gasoline, diesel, natural gas, or inverter technology to provide portable or standby electricity. It is widely used for residential backup, camping, construction sites, small businesses, emergency power, telecom base stations and outdoor equipment. In 2024, global low-power generator set production reached approximately 19.5 million units, with an average global market price of around US\$420 per unit. The global low-power generator set industry generally maintains a gross margin of 22%-36%, influenced by engine cost, fuel type, emission compliance and brand premium. The supply chain of low-power generator sets includes upstream suppliers of small engines, alternators, control boards, fuel systems, frames, exhaust systems and lithium battery packs (for inverter types). Midstream manufacturers conduct assembly, testing, emission calibration, noise control and packaging. Downstream users include households, telecom companies, construction contractors, retailers, rental companies and emergency power service providers. The low-power generator market is supported by demand for portable power, growing outdoor activities, telecom backup needs and micro-business expansion. Key trends include inverter generators with cleaner output, low-noise models, dual-fuel/hybrid systems, and smart monitoring via mobile apps. Battery-inverter generators are rapidly emerging as an alternative for indoor-safe and low-emission usage.

The global Low-power Generator Set market size was estimated at USD 8263.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10%

during the forecast period.
