Abstracts

Low power laser processing equipment refers to a type of processing equipment that utilizes low-power laser beams to carry out various processing operations on workpieces. It typically employs lasers with output power ranging from several watts to tens of watts. This equipment works by focusing the laser beam onto the surface of the workpiece. The energy of the laser beam causes thermal effects such as melting and evaporation on the workpiece surface, enabling operations like cutting, engraving, marking and micro-processing. It has the advantages of high precision, small heat-affected zone, low noise and no pollution. It is widely used in industries such as electronics, jewelry, handicrafts and medical devices for the processing of thin materials, small parts and delicate components.

The global Low Power Laser Processing Equipment market size was estimated at USD 5600.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
