Abstracts

Low Pressure Water Mist represents the latest extinguishing systems technology and is suitable for almost all types of buildings. The system is certified extensively in both marine and land-based installations. Low pressure water mist systems are supplied with a pump assembly and break tank. As with high pressure systems, low pressure systems can be utilised on both Class A and Class B fires but are typically employed as an alternative to conventional sprinkler systems where water storage is difficult. The low pressure water mist system is an efficient fire suppression and environmental control technology that has gained increasingly widespread application in recent years due to market trends. This system utilizes a low-pressure pump to spray water through tiny nozzles, producing fine water droplets that resemble a mist. Because these droplets are extremely small and disperse widely, the system can rapidly absorb heat and suppress flames during firefighting efforts, while also lowering ambient temperatures. This distinct feature has led to the extensive adoption of low pressure water mist systems in areas such as building fire protection, industrial facilities, marine vessels, and transportation vehicles.

The global Low Pressure Water Mist System market size was estimated at USD 256.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
