Abstracts

Low Smoke Halogen Free (LSHF) wire refers to insulated electrical cables engineered to minimize the emission of smoke and toxic halogen-based gases when exposed to fire or high heat. These wires utilize insulation and jacketing materials such as polyolefins, cross-linked polyethylene (XLPE), or thermoplastic elastomers that are formulated without chlorine, fluorine, bromine, or iodine, reducing the release of corrosive and hazardous acidic gases like hydrogen chloride. In the event of combustion, LSHF wires produce significantly lower levels of opaque smoke, improving visibility for safe evacuation and aiding firefighting efforts. This combination of low smoke emission and halogen-free composition makes them essential in applications where fire safety, air quality, and equipment protection are critical, distinguishing them from traditional PVC-insulated wires that can emit dense smoke and toxic fumes under similar conditions.

The global Low Smoke Halogen Free Wire market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
