## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Low-Speed Driverless Car competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. By 2024, the global production of low-speed driverless cars will reach 55,000 units, with an average selling price of US\$100,000 per unit. Low-speed autonomous vehicles (LSAVs) are self-driving vehicles that primarily operate within confined areas (such as industrial parks, scenic areas, campuses, factory parks, ports, airports, and communities), characterized by safe low-speed driving (typically no more than 20-40 km/h). These vehicles rely on sensing and navigation technologies such as lidar, cameras, millimeter-wave radar, GPS/Beidou positioning, and high-precision maps to achieve environmental awareness, path planning, and automatic control. They are capable of autonomous transportation, sightseeing shuttles, or logistics distribution in complex but relatively controllable traffic scenarios. Due to their closed operating environment, low speeds, and manageable risks, LSVs are often used as a precursor to the commercialization of autonomous driving technology, and are widely used in smart transportation, smart logistics, and smart cultural tourism.

The global Low-Speed Driverless Car market size was estimated at USD 5500.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
