## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Low-speed Unmanned Vehicles Chassis competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The low-speed unmanned vehicle chassis is the core hardware platform that supports the autonomous mobility of unmanned vehicles. It integrates power, steering, braking, suspension and other systems, and replaces traditional mechanical connections with wire control technology (electrical signal control) to achieve precise control of the vehicle. Its maximum speed is usually less than 50 kilometers per hour, suitable for closed or semi-closed scenes. Steering, braking, etc. are controlled by electrical signals to support real-time instructions of unmanned driving algorithms. The chassis is separated from the upper body (such as cargo boxes, cleaning equipment), which is convenient for quick adaptation to different application scenarios.

The global Low-speed Unmanned Vehicles Chassis market size was estimated at USD 445.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 22.60% during the forecast period.
