Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Low-Temperature Bond Grinding Wheels competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Low-temperature bond grinding wheels are grinding tools whose binder is composed of inorganic non-metallic materials (such as clay, feldspar, quartz, borosilicate glass, etc.), bonded through a glassy phase network structure formed by a sintering process at a relatively low temperature (typically within the range of 800°C to 1250°C). They possess a porous structure, high rigidity, and good self-sharpening properties, and are primarily used in high-precision, high-efficiency grinding processes. Their "low-temperature" property is a hallmark of their manufacturing process. The core of their upstream supply chain is raw materials, including the manufacture of abrasives such as alumina and silicon carbide, and inorganic non-metallic minerals such as clay and feldspar. The midstream involves processing these materials into finished grinding wheels through precision processes such as batching, mixing, molding, and high-temperature sintering. Downstream demand primarily comes from heavy industries such as automotive manufacturing and aerospace. These industries continuously require low-temperature bond grinding wheels to achieve excellent cutting performance, shape retention, and long lifespan during high-precision, high-efficiency grinding, lapping, and polishing processes. Their demand is directly linked to the global manufacturing cycle and the need for industrial upgrading. In 2024, the global production of low-temperature bond grinding wheels was approximately 5 million units, with an average selling price of approximately US\$100 per wheel, a gross profit margin of approximately 40%, and a single production line capacity of approximately 50,000 units per year.

The global Low-Temperature Bond Grinding Wheels market size was estimated at USD

500.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
