Report Overview

A low temperature gas plasma sterilizer is a type of sterilizer that uses plasma to sterilize medical devices and other objects. Plasma is a state of matter that is created when a gas is ionized. This means that some of the electrons have been removed from the atoms of the gas, creating a positively charged gas.

Low temperature gas plasma sterilizers use a variety of different gases to create plasma, including hydrogen peroxide, nitrogen, and ozone. The plasma is then used to kill microorganisms on the surface of the object being sterilized.
