Abstracts

Low temperature heat pump vacuum dryer is a drying equipment that combines low temperature, heat pump and vacuum technology, and is suitable for drying heat-sensitive materials. Its working principle is to provide a low temperature heat source through a heat pump system under a vacuum environment, and use low temperature heating and vacuum decompression to reduce the moisture evaporation point of the material, thereby efficiently removing moisture or solvents from the material. The equipment can dry at a lower temperature and effectively prevent high temperature from damaging the material. It is widely used in the pharmaceutical, food, chemical and electronic industries, especially for volatile, oxidizable or heat-sensitive materials.

The global Low Temperature Heat Pump Vacuum Dryer market size was estimated at USD 360.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.60% during the forecast period.
