Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Low-temperature High-strength Steel competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of low-temperature high-strength steel reached 3.5 million tons, with an average selling price of US\$1,250 per ton and a gross profit margin of approximately 35%. Single-line production capacity ranged from approximately 100,000 to 700,000 tons per year. This is a special type of steel that combines high strength and high toughness in low-temperature environments (typically -40°C to -196°C). Its excellent mechanical properties are achieved through nickel alloying and quenching and tempering processes. It is mainly used in key areas such as liquefied natural gas storage tanks, polar vessels, energy equipment, and heavy engineering machinery. Its core value lies in its ability to simultaneously meet the requirements for brittle fracture resistance under deep cryogenic conditions and the high strength requirements of load-bearing structures, making it an indispensable strategic material in the energy and major equipment sectors. The upstream of low-temperature high-strength steel mainly consists of suppliers of iron ore, coke, and alloy raw materials such as nickel and vanadium; the midstream comprises large steel companies with advanced metallurgical and controlled rolling and cooling processes, responsible for smelting, continuous casting, and rolling. Its downstream applications include the manufacture of critical structures in extreme environments such as energy and chemical industries, shipbuilding, and heavy machinery. The core demand stems directly from the strategic needs of the global clean energy transition and polar resource development, especially the rapid development of the liquefied natural gas industry chain, which drives a continuous and high-standard procurement demand for structural materials that can withstand ultra-low temperatures and ensure absolute safety.

The global Low-temperature High-strength Steel market size was estimated at USD 4375.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
