Abstracts

Solder paste, a unique combination of minute metal solder particle and slimy flux, is exclusively known for its usage in the printed circuit board or PCB manufacturing. This special paste attaches the mount particles to pads on the board and creates a stable bond between two different work elements. In this process, the sizes of the metal particles and the density of the flux play a significant role and decide the outcome of the solder paste. Low-temperature solder paste, is a very extraordinary blend of tiny metal particles and sticky flux. This easily dissolves even at a temperature under 180° C. Low Temperature Lead Free Solder Paste is a material used for soldering electronic components. It does not contain harmful lead components and meets environmental protection and health requirements. This solder paste is commonly used in applications such as electronics manufacturing, circuit board assembly and repair. Low-temperature lead-free solder paste is developed to replace traditional lead-containing solder paste to reduce harmful effects on the environment and human body. Due to the possible negative health and environmental effects of lead, many countries and regions have implemented regulations that prohibit or restrict lead-containing electronic products. Low temperature lead-free solder pastes typically have a lower melting point than traditional leaded solder pastes. This helps reduce the temperature exposure of electronic components during the soldering process, reducing possible thermal damage to sensitive components. Low temperature lead-free solder paste is widely used in surface mount (SMT) soldering, wave soldering and repair work of electronic components. It is suitable for a variety of electronic manufacturing and assembly processes, including electronics, circuit boards, smartphones, computers, and other electronic devices.

The global Low Temperature Lead Free Solder Paste market size was estimated at USD 346.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
