Report Overview:

Low-temperature milk is not boiled during the sterilization process, so its flavor is close to that of fresh milk. Due to the limitations of cold storage and short shelf life, the popularity of "fresh milk" is very low. However, with the development of dairy companies and cold chain transportation, "pasteurized milk" is becoming more and more popular among Chinese consumers. Low-temperature yogurt retains active lactic acid bacteria, increases beneficial intestinal flora, forms an antibacterial biological barrier, and can improve the gastrointestinal function of the human body.

The Global Low-temperature Milk and Low-temperature Yogurt Market Size was estimated at USD 626.42 million in 2023 and is projected to reach USD 844.27 million by 2029, exhibiting a CAGR of 5.10% during the forecast period.
