Report Overview

The ionization rate of low-temperature plasma is low, the electron temperature is much higher than the ion temperature, and the ion temperature can even be equivalent to room temperature. Therefore, low-temperature plasma is a non-thermal equilibrium plasma. There are a large number of active particles in low-temperature plasma. The active particles produced by ordinary chemical reactions are more diverse and more active, and are more likely to react with the surface of the material they come into contact with, so they are used to modify the surface of the material.
