Abstracts

Low temperature solder balls are specialized metallic spheres, typically composed of alloys such as tin-bismuth (Sn-Bi), tin-indium (Sn-In), or tin-silver-copper (SAC) with reduced melting points, designed for use in electronic packaging and assembly processes where heat-sensitive components, such as organic substrates, flexible circuits, or certain integrated circuits, require soldering at temperatures significantly lower than those used with conventional lead-based or high-temperature lead-free solders to prevent thermal damage, warping, or delamination while ensuring reliable electrical connections and mechanical integrity in applications ranging from consumer electronics and automotive systems to medical devices and advanced semiconductor packaging.
