## Abstracts

Solder paste, a unique combination of minute metal solder particle and slimy flux, is exclusively known for its usage in the printed circuit board or PCB manufacturing. This special paste attaches the mount particles to pads on the board and creates a stable bond between two different work elements. In this process, the sizes of the metal particles and the density of the flux play a significant role and decide the outcome of the solder paste. Low-temperature solder paste, is a very extraordinary blend of tiny metal particles and sticky flux. This easily dissolves even at a temperature under 180° C. Usually, the typical solder paste temperature extends over 250° C to 240° C, which often becomes destructive for some delicate particles. A solder paste having a melting point of 138 ° C is called a low-temperature solder paste. Global Low Temperature Solder Pastes key players include Alpha, Senju, Vital New Material and Tamura, etc. Global top four manufacturers hold a share over 45%. The largest consumer market is Asia-Pacific, has a share about 65%, followed by North America and Europe, with around 27% and 5% market share respectively. In terms of product, Silver-free is the largest segment, with a share about 80%. And in terms of application, the largest application is Stencil Printing followed by Solder Dispensing, etc. With the miniaturization and lightweight development of electronic products, more and more heat-sensitive components are used in these products, which promotes the application of low-temperature solder paste. The use of heat-sensitive components in modern electronic products is becoming more and more common, such as LEDs, ceramic substrates, etc. These components cannot withstand the high-temperature soldering of traditional solder paste. Low-temperature solder paste has multiple functions, such as thermal conductivity, insulation, etc., to meet more diverse application requirements. By optimizing the composition and production process, the long-term stability and reliability of low-temperature solder paste can be improved.

The global Low Temperature Solder Pastes market size was estimated at USD 348.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
