Report Overview

Low-temperature solder wire is a material used for electronic welding. Its melting point is relatively low, generally between 100 and 200 degrees Celsius. It is mainly used for welding work in the fields of electronic product repair, parts repair, DIY and other fields. It is especially suitable for electronic components that are sensitive to welding temperature. The advantage of low-temperature solder wire is that it has low operating temperature, causes little damage to electronic components, and is less prone to problems such as welding bulging and breakage. Compared with traditional high-temperature solder wire, low-temperature solder wire is more suitable for products with higher welding requirements. At the same time, low-temperature solder wire is favored by electronics enthusiasts and DIYers because of its low operating temperature.

The global Low Temperature Solder Wire market size was estimated at USD 1033 million in 2023 and is projected to reach USD 1775.09 million by 2032, exhibiting a CAGR of 6.20% during the forecast period.
