Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Low-temperature Stirring Reaction Bath competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of Low-temperature Stirring Reaction Bath reached approximately 45,000 units, with an average selling price of approximately US\$4,800 per unit. The single-line production capacity is approximately 1,200 units per year, with an average gross profit margin of approximately 25-35%. Low-temperature Stirring Reaction Bath is a cryogenic, thermostatic instrument used in laboratories. A magnetic stirrer maintains uniform flow of the medium within the bath, ensuring consistent temperature throughout the experimental solution. Combining cryogenic cooling with magnetic stirring, it is suitable for a variety of low-temperature experiments requiring precise temperature control and stirring. The upstream supply chain for low-temperature stirred reaction baths primarily includes the raw materials needed for their manufacture, including compressors, circulation pumps, temperature sensors, controllers, stainless steel sheets, electronic components, and refrigerants. Its downstream applications are broad and critical, including in the pharmaceutical industry for drug synthesis and crystallization processes, in biochemistry for vaccine development and cell culture, and in materials science for polymer polymerization and nanomaterial preparation.

The global Low-temperature Stirring Reaction Bath market size was estimated at USD 216.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
