## Abstracts

Low Tunnel Film, often referred to as low tunnel plastic or mini-tunnel film, is a type of agricultural covering used to protect crops from adverse weather conditions and to create a favorable microclimate for growth. It is typically made from transparent or translucent plastic materials and is installed over rows of plants in an arched or tunnel-like structure, hence the name "low tunnel." This film helps in increasing soil temperature, protecting against frost, reducing wind damage, and can also contribute to earlier crop yields and extended growing seasons. Low tunnel films are widely used in small-scale farming and gardening to improve crop quality and yield under varying environmental conditions.
