Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Low Viscosity Epoxy Grout competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Low viscosity epoxy grout is an epoxy resin-based material with a relatively low viscosity, commonly used in a variety of applications in the construction and engineering fields, such as crack repair, structural reinforcement, gap filling and anchoring. The low viscosity allows this material to more easily penetrate into small cracks and voids and form a strong structure after curing. In 2024, the global production of low-viscosity epoxy grout was approximately 7,111 tons, with an average global market price of approximately US\$45 per kilogram. The gross profit margin of major companies in the industry ranged from 25% to 30%. Single-line production capacity was 5,000 to 12,000 tons per year. The upstream of the low-viscosity epoxy grouting material industry chain mainly includes suppliers of chemical raw materials such as epoxy resin, curing agents (such as amines and acid anhydrides), diluents, and additives; the midstream consists of professional building materials or chemical grouting material manufacturers, responsible for formula research and development, production and quality control; the downstream is widely used in infrastructure construction and maintenance projects such as water conservancy and hydropower, rail transit, bridges and tunnels, and industrial plants.

The global Low Viscosity Epoxy Grout market size was estimated at USD 320.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
