Abstracts

Low VOC paints are those that contain less Volatile Organic Compounds (VOC) or VOC Solvents than traditional coatings. The VOC solvents act to slow the initial drying by maintaining a "wet-edge" which gives a longer time to work with the product. So, when VOC solvents are removed, the coating must be formulated differently to compensate for the lower level of VOC solvents. The application methods will also need to be altered to achieve the best finish.

The global Low VOC Paints and Coatings market size was estimated at USD 416.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
