## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Low Voltage Automatic Transfer Switch(ATS) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Low-voltage dual-power transfer switches are critical electrical devices used to automatically or manually switch between primary and backup power supplies, ensuring power continuity. Estimated sales in 2024 were approximately 500,000 units, with an average unit price of approximately US\$1,200 and a single-line capacity of approximately 30,000 units per year. The upstream supply mainly includes power switching components (such as contactors and circuit breakers), controller chips, cables and connectors, metal housings, and insulation materials. The downstream market primarily targets scenarios requiring reliable backup power, such as data centers, hospitals, industrial plants, and infrastructure. The estimated gross profit margin is approximately 22%. The product cost structure is roughly as follows: materials account for approximately 45%, manufacturing and assembly for approximately 30%, R&D and testing for approximately 15%, and logistics and management for approximately 10%. Classification by parameters includes: rated voltage (e.g., ? 400 V type, 401-1000 V type, high-voltage type), switching mechanism (e.g., mechanical type, static semiconductor type), and control method (e.g., manual switching, automatic switching, intelligent network switching type).

The global Low Voltage Automatic Transfer Switch(ATS) market size was estimated at USD 600.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
