### Report Overview

The low-voltage composite switch is a product used for switching capacitors in the low-voltage reactive power compensation device. Its basic working principle is to connect the thyristor and the magnetic latching relay in parallel, controlled by the internal single-chip microcomputer, at the moment of switching on and off, the thyristor undertakes the zero-crossing switching, and then the magnetic latching relay switches on and runs. The composite switch not only has the advantages of zero-crossing switching without inrush current, but also has the characteristics of low operating power consumption of the AC contactor.

The global Low Voltage Composite Switch market size was estimated at USD 4850.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.35% during the forecast period.
