Report Overview

When the evaporator fins are seriously dusty, the circulating air volume of the indoor unit is reduced, the refrigerant is insufficient, the evaporator is frosted or frozen, the suction pressure will be too low, the air conditioner will not work properly, and it is extremely harmful to the compressor . Therefore, in larger refrigeration equipment, a low pressure controller is installed on the compressor suction pipe. When the suction pressure is too low, the low-pressure controller automatically cuts off the main circuit of the air conditioner through the control circuit board.
