## Abstracts

The low-voltage enclosed power cabinet is a low-voltage power distribution equipment used in three-phase AC power systems of 400V and below, mainly used for power and lighting power distribution. The equipment adopts a closed design, which can effectively improve safety, prevent the influence of the external environment on electrical components, and reduce the risk of human error. Its structure is usually modular, the cabinet is made of high-strength metal material, and is equipped with circuit breakers, contactors, relays, transformers, busbar systems and measurement and control instruments. It has overload, short circuit, leakage and other protection functions. The protection level of the enclosed power cabinet can reach IP54 or higher, with good dustproof, waterproof and corrosion resistance, and can adapt to harsh environments. In addition, the power cabinet is usually equipped with a good heat dissipation system to ensure the stability of the temperature inside the cabinet, thereby improving the service life and operation reliability of the equipment. With the development of intelligent distribution systems, some low-voltage enclosed power cabinets have integrated intelligent monitoring functions, which can realize remote monitoring, power management and fault diagnosis, and further improve the operation efficiency and safety of the power system.

The global Low Voltage Enclosed Power Cabinet market size was estimated at USD 2006.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.20% during the forecast period.
