## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Low Voltage Formed Foil competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Low Voltage Formed Foil refers to a type of metal foil, typically aluminum or copper, that has been processed and formed for use in low-voltage electrical applications. Unlike ultra-high-voltage formed foil, it is designed for devices and systems operating at lower voltage levels, generally below 1 kV. In 2024, global Low Voltage Formed Foil production reached approximately 11.6 k tons with an average global market price of around US\$54 k usd per ton. The production capacity for Low Voltage Formed Foil in 2024 was approximately 12 k tons. The typical gross profit margin for Low Voltage Formed Foil between 20% and 40%. The Low Voltage Formed Foil value chain has upstream suppliers providing high-purity aluminum and copper foils, coating and surface treatment materials, as well as forming equipment and automation control systems. Downstream applications include low-voltage power equipment manufacturing, consumer electronics capacitors, electronic components, communication devices, and automotive electronics, where the foils are used for capacitor production, filtering, energy storage, and electronic insulation. With the rapid development of miniaturized and high-performance electronic products, home appliances, and automotive electronics, the market demand for high-precision, reliable, and customized low-voltage formed foils continues to grow, driving technological upgrades and coordinated development across the industry chain. The Low Voltage Formed Foil market primarily serves applications in low-voltage power equipment, consumer electronics capacitors, electronic components, communication devices, and automotive electronics. Upstream, it involves suppliers of high-purity aluminum and copper foils, coatings, and surface treatment materials, while downstream includes power equipment manufacturers,

electronic component producers, and automotive electronics companies. Driven by the miniaturization and high-performance requirements of electronic products, as well as the rapid growth of home appliance and automotive electronics markets, demand for low-voltage formed foils is steadily increasing, with trends toward higher precision, customization, and improved reliability.

The global Low Voltage Formed Foil market size was estimated at USD 626.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
