Abstracts

Low voltage piezoelectric stack actuators are co-fired multilayer actuators. These have very thin ceramic layers that are made by casting a ceramic / organic slurry to form a tape, dried, electroded with a thin precious metal electrode, usually a silver palladium electrode, the electrode tape is stacked, laminated, and fired to a dense ceramic / electrode package. The fired package is cut to size exposing the electrodes and the electrical connections are made. The stack is poled by applying a DC field to activate the piezo material and a protective insulating coating is applied. Co-fired actuators are driven by much lower voltages, 100 V-150 V.

The global Low Voltage Piezoelectric Stack Actuator market size was estimated at USD 353.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
