Abstracts

Wire and cable, as a widely used wire product in the fields of power, electronics, communication, etc., its main function is to transmit electrical (magnetic) energy, information, and achieve the conversion of electromagnetic energy. In a broad sense, wires and cables can also be referred to as cables, while in a narrow sense, cables specifically refer to insulated cables. Insulated cables consist of one or more insulated wire cores, as well as their respective possible cladding layers, total protective layer, and outer protective layer. The main characteristics of low-voltage power lines and cables include: extruding (wrapping) insulation layer outside the conductor, such as overhead insulated cables; Twisted several cores (corresponding to the phase, neutral, and ground wires of the power system), such as overhead insulated cables with two or more cores; Or add a protective layer, such as plastic/rubber sheathed wires and cables. The main process technologies include drawing, twisting, insulation extrusion (wrapping), cabling, armor and protective layer extrusion, etc. The different process combinations of various products have certain differences.

The global Low Voltage Wires and Cables market size was estimated at USD 35010.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
