Report Overview

LPDDR DRAM provides a high-performance solution with significantly reduced power consumption, which is a key requirement for mobile applications such as tablets, smartphones, and automobiles. The SoC required for such applications tends to use fewer storage devices and shorter interconnections on each channel, and LPDDR DRAM runs faster than standard DDR DRAM (for example, LPDDR4/4X DRAM runs at a maximum speed of 4267 Mbps, while the operating speed of standard DDR4 DRAM is up to 3200 Mbps), so it can provide higher performance. However, LPDDR DRAM is not used in such devices. When in standby, they can be placed in a low-power state, such as a deep sleep state, or they can be operated at a lower frequency using the dynamic frequency scaling (DFS) function. Therefore, when the storage channel is on standby, the storage controller can use these low power consumption functions promptly to reduce the total power consumption.

The global LPDDR DRAM market size was estimated at USD 6817 million in 2023 and is projected to reach USD 12323.51 million by 2032, exhibiting a CAGR of 6.80% during the forecast period.

North America LPDDR DRAM market size was estimated at USD 1989.42 million in 2023, at a CAGR of 5.83% during the forecast period of 2024 through 2032.
