Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on LPG Ton-level Small Tanks competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Liquefied petroleum gas (LPG) storage tanks are pressure vessels used to store liquefied petroleum gas (propane) as the main component medium. The saturated vapor pressure of the storage medium at 50°C is less than or equal to 1.63 MPa, and the H₂S solubility is less than 7.7 mg/L. The capacity of LPG ton-level small tanks ranges from 0.454 cubic meters to 7.57 cubic meters, that is, 120 gallons to 2000 gallons. In countries with developed natural gas industries, LPG is still a very important clean energy. As a clean energy like natural gas, LPG should also be valued and further developed and utilized in China. On the one hand, due to factors such as resource conditions, infrastructure construction, and economic development level, the penetration rate of pipeline natural gas in my country's cities is still relatively low. By the end of 2024, it will be difficult for most of China's suburbs, rural areas, and mountainous cities outside the central urban areas to achieve pipeline natural gas supply for a long time in the future. On the other hand, even in countries with highly developed natural gas pipeline networks, it is impossible to achieve full coverage of towns and cities. LPG is still an indispensable gas clean fuel for developed countries. For example, the United States is still the world's largest LPG consumer, and Japan's LPG users and natural gas users account for almost half each. Both the United States and Japan have listed LPG as a national strategic reserve material. In order to achieve safe and efficient use of LPG, developed countries such as Europe, the United States, and Japan have gradually changed the gas supply method of LPG from "bottled supply, storage at each household, and self-keeping" to "small storage tank gas supply, special tank truck distribution, and enterprise remote online monitoring". This has not only greatly reduced

the LPG safety accident rate, but also effectively reduced the LPG logistics cost and use cost.

The global LPG Ton-level Small Tanks market size was estimated at USD 791.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
