Abstracts

Lumbar arthrodesis plates are specialized orthopedic implants designed to stabilize and fuse spinal segments in the lumbar region, typically used in spinal fusion surgeries to treat conditions such as degenerative disc disease, spondylolisthesis, spinal fractures, or deformities. These plates, often made from biocompatible materials like titanium or cobalt-chromium alloys, are surgically attached to the vertebrae with screws to provide rigid internal fixation, restrict motion, and promote bone growth for successful arthrodesis. The market for these devices is driven by an aging global population, rising prevalence of spinal disorders, advancements in surgical techniques favoring minimally invasive procedures, and continuous innovation in implant design and material science to improve outcomes and reduce complications.

The global Lumbar Arthrodesis Plates market size was estimated at USD 1245.6 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.75% during the forecast period.
