Abstracts

The lumbar artificial disc market encompasses the development, manufacturing, and commercialization of medical devices designed to replace a damaged or degenerated intervertebral disc in the lumbar spine, primarily indicated for conditions such as degenerative disc disease or herniated discs that have not responded to conservative treatments. These devices, typically constructed from materials like medical-grade polymers, metals, or a combination thereof, aim to restore spinal motion, maintain disc height, and alleviate pain while reducing adjacent segment degeneration compared to traditional spinal fusion surgery. The market includes both total disc replacement systems, which fully substitute the natural disc, and nucleus replacement devices, which replace only the inner core, with regulatory approvals, clinical outcomes, and surgeon adoption playing critical roles in product differentiation and market dynamics.

The global Lumbar Artificial Disc market size was estimated at USD 642.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
