This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Lure Rod competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A lure rod is a fishing rod specially used for lure fishing. Its core function is to cast and manipulate lures (bionic baits) to simulate the movements of small prey to attract predatory fish to attack. Lure fishing comes from the English word "Lure", which means "temptation". It emphasizes actively searching for fish schools rather than waiting for fish to bite. Lure rods usually have high sensitivity, good resilience and precise control, and are suitable for frequent casting and variable control movements.
