Report Overview

This report focus on LV Block Contactors market.

A contactor is an electrically-controlled switch used for switching an electrical power circuit. A contactor is typically controlled by a circuit which has a much lower power level than the switched circuit, such as a 24-volt coil electromagnet controlling a 230-volt motor switch.

In addition to their current ratings and rating for motor circuit control, contactors often have other construction details not found in relays. Unlike lower-powered relays, contactors generally have special structures for arc-suppression to allow them to interrupt heavy currents, such as motor starting inrush current. Contactors usually have provision for installation of additional contact blocks, rated for pilot duty, used in motor control circuits.
