Abstracts

Lyocell is a form of rayon which consists of cellulose fibre made from dissolving pulp (bleached wood pulp) using dry jet-wet spinning. Lyocell fabrics are used in a variety of industries such as fashion, textiles, medical, paper and pulp. Due to its versatility, lyocell fiber is used as a replacement for cotton and silk in sportswear, shirts, bedding, denim, T-shirts, pants and towels. Due to its high absorbency, it is ideal for medical dressings. Hence, high usage of lyocell fabric is expected to accelerate market growth. In addition to this, as environmental issues become increasingly serious, the demand for lyocell fiber is increasing around the world. Lyocell fabrics are a turning point in the development of environmentally friendly and sustainable textiles. It is a man-made fiber made from wood pulp. It is a cellulose fiber produced through a solvent spinning process. The natural polymer cellulose is found in plant cells. Hardwood trees provide cellulose for the production of lyocell fiber. Other ingredients used in the process include water, solvents and finishes. This product gives the fabric a great shine and depth of color. Therefore, its main ingredient, cellulose, comes from well-managed forests and its manufacturing process produces no by-products harmful to human health or the environment. Hence, the demand for lyocell fabric is expected to surge over the forecast period.

The global Lyocell Rayon market size was estimated at USD 1414.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
