Abstracts

The multi-point low voltage differential signal (M-LVDS) transceiver is a serial bus system based on differential signal transmission, supporting multi-point communication and allowing up to 32 devices to exchange data on the same bus. Compared with the traditional point-to-point LVDS system, M-LVDS achieves multi-point connection by increasing the driver current, which is suitable for high-bandwidth and low-power application scenarios. Its data transmission rate can reach 500 Mbit/s and is widely used in industrial automation, communication equipment, medical instruments, automotive electronics and other fields.

The global M-LVDS Transceiver market size was estimated at USD 137.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.40% during the forecast period.
