Report Overview:

Macadamia nuts are the fruit (edible seed) of the evergreen macadamia tree, which belongs to the genus *Macadamia* of the Proteaceae family. Only three of the species are of commercial importance, namely *Macadamia integrifolia*, *Macadamia ternifolia*, and *Macadamia tetraphylla*. Macadamias are native to Australia, but today, they are grown in many areas in the world. The largest producers of macadamia nuts are Australia and South Africa, followed by Kenya, China, USA (Hawaii), Guatemala, Malawi, Vietnam, Colombia, New Zealand and Swaziland.

Once planted, the macadamia trees need five years before being able to carry their first fruit – their maximum carrying capacity is reached after ten years. Macadamia trees require warm temperatures and good annual rainfall to yield a good crop. The biggest threats to annual production come from droughts and heavy frost.

The nuts themselves grow encased in a hard, woody shell, which is protected by a green-brown fibrous husk that splits open as the nut matures. Macadamia nuts are harvested mechanically or gathered from the ground in different periods throughout the entire year, depending on the country of origin. Because flowering occurs over several months, macadamia nuts mature and drop to the ground over an extended period, so they have to be harvested regularly. Due to long-term maturity, it is possible for flowering and harvesting to overlap. In the European winter months, they are harvested in Africa and Hawaii, while during the spring and summer months, harvesting occurs in Australia and Central and South America.

The Global Macadamia Nuts Market Size was estimated at USD 1222.02 million in 2023

and is projected to reach USD 1425.49 million by 2029, exhibiting a CAGR of 2.60% during the forecast period.
