Abstracts

Machinable ceramic has a continuous use temperature of 800°C and a peak temperature of 1000°C. Its coefficient of thermal expansion readily matches most metals and sealing glasses. It is non-wetting, exhibits zero porosity, and unlike ductile materials, won't deform. It is an excellent insulator at high voltages, various frequencies and high temperatures. And, when properly baked out, it won't outgas in vacuum environments. Machinable ceramics allow ceramic components to be made without the delay or expense of conventional ceramic manufacturing processes. The major players in global machinable ceramic market include Corning, Tokuyama, Ferrotec, etc. The top 3 players occupy about 85% shares of the global market. Japan and Europe are main markets, they occupy about 85% of the global market. Fluorophlogopite Glass Ceramic is the main type, with a share about 60%. Semi-Conductor Industry is the main application, which holds a share about 40%.

The global Machinable Ceramic market size was estimated at USD 171.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.00% during the forecast period.
