Abstracts

Machinable glass ceramic is a specialized class of materials engineered to combine the thermal stability, chemical resistance, and electrical insulation of traditional ceramics with the machinability and dimensional precision typically associated with metals or plastics. These materials, often based on formulations like fluorophlogopite mica within a glassy matrix, can be precisely shaped, drilled, and threaded using standard metalworking tools without the need for high-temperature sintering or diamond tooling, making them ideal for applications requiring complex geometries, tight tolerances, and performance in harsh environments.

The global Machinable Glass Ceramic market size was estimated at USD 315.67 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
