Abstracts

A permanent magnetic chuck uses the flow of permanent magnets to fix parts on which to execute mechanical workings. The electro-permanent magnetic chucks represent the technological development of electromagnetic systems and manual permanent magnet chucks. The main advantage is that they require current only to change the state of the system, a few seconds to switch from OFF (DEMAG) to ON (MAG) and vice versa, overcoming the limit associated with the continuous current absorption of the electromagnets and that of the reduced forces of the manual chucks.

The global Machine Tool Electro Permanent Magnetic Chuck market size was estimated at USD 166.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
