## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Machined-Ring Needle Roller Bearings competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The average price of machined ring needle roller bearings in 2024 is about US\$25, and the annual output is estimated to be more than 10 million pieces. It is a type of needle roller bearing product with an outer ring made of a whole piece of bearing steel or alloy steel through precision turning, heat treatment and grinding. It has high precision, high rigidity and excellent load-bearing capacity. Its inner and outer rings are both machined. Compared with stamped outer ring needle roller bearings, it has higher structural stability and rotation accuracy. It is widely used in key parts such as automotive transmissions, hydraulic pumps, power tools, printing machinery, construction equipment and aviation power systems with limited space but large loads and high speeds. This type of bearing can be matched with an inner ring or roll directly on the shaft surface. The structure is diverse, and the common ones are closed/open, with or without seals, single-row or double-row. It has good fatigue life and impact resistance, and can adapt to harsh working conditions such as complex loads and high-speed rotation. It is one of the important components in precision transmission systems.

The global Machined-Ring Needle Roller Bearings market size was estimated at USD 251.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
