## Abstracts

Machinery moving service refers to a specialized set of industrial services focused on safely lifting, transporting, positioning and reinstalling heavy or complex equipment within a facility, between plants or across regions. Unlike general freight or household moving, machinery moving combines engineered planning, heavy rigging, customized handling tools and often civil or electrical work to deal with high-value, bulky, fragile or safety-critical assets. A typical engagement begins with a site survey and engineering assessment that map weights, dimensions, center of gravity, floor load capacities, access constraints and route obstacles. Based on this, the machinery mover designs a method statement covering lifting plans, rigging points, skid systems or rollers, crane or gantry requirements, jacking arrangements, and, where needed, specialized trailers or self-propelled modular transporters. The machinery moving service market sits at the intersection of industrial logistics, construction, plant engineering and specialized rigging, and its fortunes are closely tied to capital investment cycles in manufacturing, construction, energy and infrastructure. On the demand side, drivers include greenfield factory construction, brownfield expansions, equipment upgrades for automation and electrification, reshoring and nearshoring of production, and full-plant relocations as companies adjust global footprints. At the same time, decommissioning of aging plants, energy transition projects, and the build-out of data centers and high-tech facilities create a steady stream of complex lifting and relocation work. Because moving large, high-value machinery carries significant safety, regulatory and insurance risk, many asset owners increasingly outsource to specialist rigging and machinery-moving firms rather than rely on in-house maintenance crews, a trend reinforced by stricter health-and-safety expectations and skills shortages. The service mix is shifting from ad-hoc, job-by-job lifting to more integrated, turnkey offerings that bundle engineering, permitting, heavy haulage, dismantling, installation and even factory layout optimization under one contract.

The global Machinery Moving Service market size was estimated at USD 615.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
