Report Overview

Maduramicin Ammonium is a type of ionophore antibiotic that is commonly used in the feed industry as a coccidiostat for poultry. It helps in preventing and controlling coccidiosis, a common and costly parasitic disease in poultry. Maduramicin Ammonium works by disrupting the ion balance within the coccidia, ultimately leading to their death. This product is highly effective in improving the overall health and growth performance of poultry, making it a valuable component in poultry feed formulations.

The market for Maduramicin Ammonium is experiencing steady growth due to the increasing demand for poultry products worldwide. As the global population continues to grow, the demand for high-quality protein sources such as poultry meat and eggs is also on the rise.
