Abstracts

Mag Drill Annular Cutters are a type of core drill designed specifically for cutting holes in metal. Named after their annular (ring-like) shape, annular cutters only remove material around the periphery of the hole, leaving a solid core or slug at the center. This design reduces the cutting area compared to traditional twist drills, allowing for faster cutting and less chip generation. Widely used in construction, machining, and steel fabrication, these cutters are ideal for drilling through thick metal materials quickly and efficiently.

The global Mag Drill Annular Cutters market size was estimated at USD 105.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.50% during the forecast period.
