## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Mag Drive Liquid Ring Vacuum Pump competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of magnetically driven liquid ring vacuum pumps reached 3,778 units, with an average selling price of US\$28,500 per unit. A magnetically driven liquid ring vacuum pump is a leak-free, sealed fluid machine that combines magnetic transmission technology with the principles of a liquid ring vacuum pump. Its core structure consists of a magnetic coupling, pump body, impeller, and liquid ring forming system. Power transmission is achieved through contactless magnetic coupling between an external permanent magnet or electromagnet and an internal driven magnet, replacing traditional mechanical seals or packing seals. During operation, an appropriate amount of working fluid (such as water or oil) is injected into the pump chamber. As the impeller rotates, centrifugal force causes the fluid to form concentric rings, dividing the pump chamber into multiple crescent-shaped working chambers. Gas is drawn in, compressed, and discharged through volume changes, creating a vacuum environment. The magnetic drive liquid ring vacuum pump industry chain covers three major links: upstream raw materials and core components supply, midstream manufacturing technology integration and downstream terminal applications: the upstream is centered on special metal materials (such as stainless steel 316L, alloy steel), fluoroplastics (PTFE/PFA), ceramics, etc., and key components are provided by Baosteel, Tata Steel, Kobe Steel (special steel), Germany's MANN+HUMMEL (seals), Japan's NSK (bearings) and other companies. Domestic Lanzhou Highland Pump Industry has broken through the bottleneck of corrosion-resistant materials through independent research and development of fluoroplastic magnetic pumps. International suppliers such as Sweden's Atlas Copco Group have integrated magnetic pumps and

liquid ring system technologies through the acquisition of Shandong Bozhong Vacuum; the midstream is divided into high-end customization and standardized production. International leaders Atlas Copco and Gardner of the United States Denver dominates the semiconductor and new energy fields, while domestic companies such as Shanghai Shangcheng Pumps and Valves and Bozhong (Shandong) Industrial Equipment focus on fluoroplastic magnetic pumps and MVR evaporation systems in the pharmaceutical and chemical industries. Emerging companies include Qingyu Pumps, Suli Pumps and Valves, and Huaxing Group. Their downstream products are widely used in high-corrosion and high-vacuum scenarios, including chemical pharmaceuticals, new energy, environmentally friendly foods, semiconductors, and other fields, forming an industry trend of deep integration of material upgrades, process integration, and terminal demand.

The global Mag Drive Liquid Ring Vacuum Pump market size was estimated at USD 108.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
