Abstracts

A ventricular assist device (VAD) is a device that helps pump blood from the lower chambers of the heart to the rest of the body. The MagLev (Magnetic Levitation) ventricular assist device (VAD), also known as a magnetic levitation artificial heart, is an advanced medical device used to treat severe heart failure. The magnetic levitation VAD belongs to the third generation of centrifugal pump type VAD, which uses full magnetic levitation or magnetic-fluid hybrid levitation bearing technology. Currently, the global magnetic levitation ventricular assist device (VAD) market is monopolized by Abbott's HeartMate 3, which has now become the most commonly used left ventricular assist device (LVAD) in the world, with a market share of over 80%. Medtronic's HeartWare HVAD (magnetic fluid hybrid suspension ventricular assist device) is the second largest VAD device in market share after Abbott's HeartMate 3, but due to serious adverse events, the product was announced to be delisted and sales stopped in June 2021. This undoubtedly reinforces Abbott's monopoly in the VAD market. From the perspective of the global VAD device market, the main manufacturer in the United States is Abbott, and full magnetic levitation products have become the absolute mainstream. Competition in Europe is more intense, with more products approved earlier, but they are mainly used the second-generation technology (axial pump). The main player is Berlin heart CmbH.

The global MagLev Ventricular Assist Device (VAD) market size was estimated at USD 1182.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.80% during the forecast period.
