Abstracts

Magnesium alloy thixoforming equipment is specialized machinery used to shape magnesium alloys through a process called thixoforming. In this method, magnesium alloys are heated to a semi-solid state, where the material exhibits a unique "thixotropic" property, allowing it to flow like a liquid under shear forces while maintaining the solid strength structure of a metal. This process is advantageous for producing high-strength, lightweight, and intricate magnesium alloy parts with excellent dimensional accuracy and minimal post-processing. Thixoforming is widely used in industries such as automotive, aerospace, electronics, and medical devices due to its ability to create complex parts with improved mechanical properties and reduced porosity.

The global Magnesium Alloy Thixoforming Equipment market size was estimated at USD 787.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
