Abstracts

A magnesium alloy wheel is a type of wheel made from a magnesium-based alloy, which is a combination of magnesium and other metals like aluminum, zinc, or manganese. Magnesium alloys are favored for their light weight, strength, and durability, which makes them an ideal material for use in automotive wheels, particularly in high-performance sports cars and racing vehicles. Magnesium alloy wheels are typically cast in molds using die-casting or sand-casting techniques. The alloy is melted, poured into molds, and allowed to solidify. Once cooled, the wheels undergo additional processes like machining, heat treatment, and surface finishing.

The global Magnesium Alloy Wheels market size was estimated at USD 1075.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 45.00% during the forecast period.
