Abstracts

Magnesium-based master alloys are specialized metallic compounds where magnesium serves as the primary base element, combined with one or more alloying elements?such as zirconium, calcium, manganese, or rare earth metals?in precise, elevated concentrations. These alloys are not used as standalone materials but are strategically added in small quantities to molten base metals, primarily aluminum or other magnesium alloys, to introduce specific properties, refine grain structures, enhance mechanical characteristics, or improve corrosion resistance. They function as efficient carriers of hard-to-dissolve or reactive elements, ensuring uniform dispersion and effective modification during metal processing, which makes them critical in producing high-performance, lightweight components for aerospace, automotive, and electronics applications.

The global Magnesium Based Master Alloy market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.15% during the forecast period.
