Abstracts

Magnesium hydroxide powder is an inorganic compound with the chemical formula $Mg(OH)_2$, widely recognized for its versatile industrial and commercial applications. It serves primarily as a flame retardant and smoke suppressant in plastics, rubber, and construction materials due to its endothermic decomposition properties that absorb heat and release water vapor. Additionally, it functions as an antacid in pharmaceuticals, a pH adjuster and clarifying agent in water treatment processes, and a source of magnesium in agricultural supplements and food additives. Its non-toxic, environmentally benign nature and high thermal stability make it a preferred alternative to halogen-based flame retardants in various sectors, aligning with increasing regulatory and sustainability demands.

The global Magnesium Hydroxide Powder market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
